

## How to choose your ceiling fan

<math>< \Phi 100 \text{ cm}</math>

<math>\Phi 100-125 \text{ cm}</math>

> <math>\Phi 125 \text{ cm}</math>

The Ceiling fans are measured by the full size of their blade span, which is the diameter of the circle that you see when the fan blades are in motion. We have divided our ceiling fans into three groups: Small Rooms- with a space less than 13 m<sup>2</sup>, Medium size rooms with a space between 13 m<sup>2</sup> and 20m<sup>2</sup>, and the last one the big size rooms with a space larger than 20m<sup>2</sup>.

## One ceiling fan for the whole year

### SUMMER SEASON

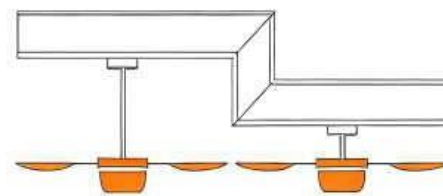

Clockwise rotation creates a cooling breeze

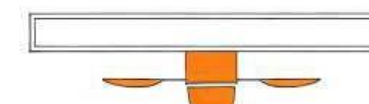

### WINTER SEASON

Counterclockwise rotation recirculates warm air efficiently by eliminating hot-air stratification, without creating a direct downdraft

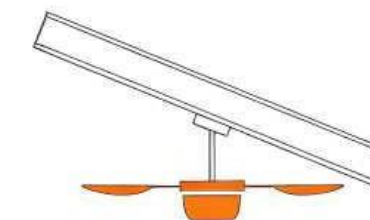

## Ceiling Fan Installation Guide

In two heights mount

Semiflush

Slope ceiling

## How to choose Light

With LED Light

With Bulbs

Without Light

### AC vs DC Motor?

AC (Alternating Current) and DC (Direct Current) ceiling fans have their advantages and disadvantages. Fans were first manufactured using AC motors they are more affordable in manufacturing, have been around a long time creating the belief that they are more reliable. DC ceiling fans are more energy efficient, offer greater speed control, are quieter, have a longer lifespan. They deliver more torque, power.

Alternating current with 3 speeds.

Direct current with 6 speeds.

### Multiple remote control options

DC motor remote control

AC motor remote control

DC motor wall control

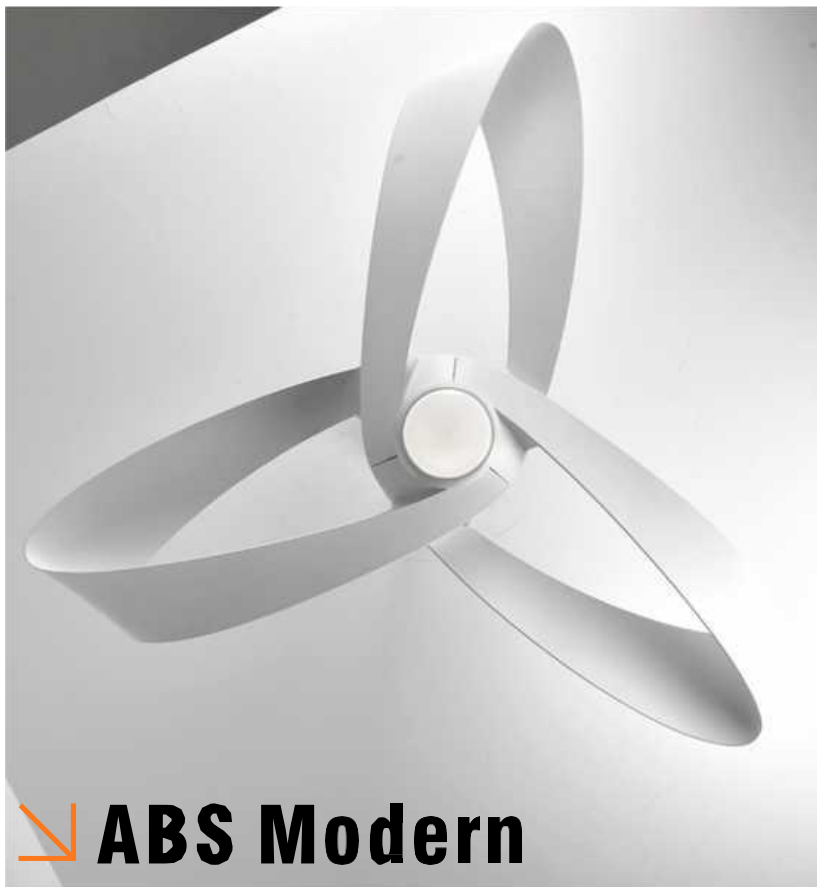

AC motor wall control

We have more remotes to choose from

### Material

ABS is a kind of plastic, very resistant and aerodynamic. Plywood is a very resistant material derived from wood. PC is a kind of plastic, very resistant and transparent. Wooden Blades are quieter.
